

R TAPE CONFORM SERIES® WITH RLA® RELEASE LINER ADHESION TECHNOLOGY

Graphics masked with ordinary application tape are prone to wrinkling, tunneling and edge curling, especially when rolled!

R Tape Conform Series® Application tapes and premasks exhibit superior lay flat and resist edge curl and tunneling for a neat, professional appearance.

Features & Benefits

- Sticks to slick release liners.
- Graphics do not dog ear & stick together.
- Fewer problems when shipping rolled graphics.
- Graphics look more professional & have more sales appeal.
- Reduced graphics damage means fewer customer complaints
- Better looking applied graphics with fewer wrinkles & bubbles.
- A Comprehensive family of Standard & Premium grade tapes in a variety of tack levels from low to extra high.

R Tape Conform Series® encompasses a comprehensive line of standard and premium grade application tapes and premium grade premasks for UV inks and clear coats. A full range of tack levels (low, medium, high and ultra-high) is available for each paper grade.

Each product offering in the R Tape Conform Series® features its advanced RLA™ adhesive technology in release liner adhesion. Special adhesive additives allow the tapes to stick to slick silicone release liners. Because these tapes lay flat and conform to the liners, even when rolled, the Conform Series® products resist wrinkling, tunneling and edge curling.

The premium grade Conform Series® premasks are also specially formulated to adhere to UV screen printing inks and clear coats. In some cases, these premasks adhere so well to the liner that they eliminate the need for heat and vacuum application equipment. The lay flat and conformability characteristics make the premasks an excellent choice for the large format truck and building graphics programs, requiring prolonged storage. Because R Tape Conform Series® tapes resist edge curl and tunneling, stay neat and clean, they present a professional image. What's more, in transporting vinyl markings to a job site, graphics do not dog ear and stick together. Wrinkle-free graphics also result in wrinkle-free application.

R Tape Conform Series® tapes also feature the clean-tearing, no-legging adhesive system, which has been incorporated into our existing line. The improved adhesive system allows the product to be torn with no adhesive legging. R Tape Conform Series® tapes also handle much easier. If adhesive touches adhesive, the forgiving adhesive system permits the user to pull the tape apart easily with no adhesive delamination. The improved application tapes also perform remarkably well, when using wet application techniques. The new technology anchors the adhesive to the paper facestock, preventing adhesive transfer to vinyl graphics, eliminating time-consuming clean up.
